EXPERIMENT 8

VINEETH P -240701589

Storyboard Design for Doctor Appointment Booking Application using Balsamiq

AIM:

To design a storyboard representing the user flow of a doctor appointment booking mobile application using Balsamiq.

OBJECTIVE:

To create a clean and user-friendly interface that helps users manage medical records, communicate with doctors, and book appointments easily.

PROCEDURE:

1. The doctor appointment booking application concept was selected.
2. The key screens such as medical records, messages, and upcoming visits were identified.
3. A new project was created in Balsamiq Wireframes.
4. Multiple mobile screens were added to represent each feature of the application.
5. UI components like cards, buttons, icons, and text fields were used to design each screen.
6. A consistent color theme and layout were maintained across all screens.
7. The screens were arranged properly to represent the overall user interaction and flow.

USER FLOW:

1. **Medical Records Screen:**
   This screen displays the user's health data such as vital stats, recent diagnostics, and immunization status in a card-based layout.
2. **Messages Screen:**
   This screen allows users to communicate with doctors through chat, enabling quick consultation and support.

3. **Upcoming Visits Screen:**
   This screen shows scheduled appointments with doctors, including date, time, and doctor details.
4. **Doctor Interaction:**
   Users can view doctor details and interact with them through booking or messaging features.
5. **Appointment Management:**
   Users can schedule, view, and manage their appointments easily within the app.
6. **Confirmation:**
   The app confirms scheduled visits and provides necessary details for the frame.

FRAMES:

1.Medical Records:

2.Messages:

TODAY, OCT 24
Hello! I've reviewed your latest blood panels. Everything looks consistent with your recovery plan. How have you been feeling since we increased the dosage?
09:15 AM
Hi Dr. Vance. I've noticed a significant improvement in my energy levels in the morning. No more grogginess!
09:22 AM
That's excellent news. I've shared a new nutrition guideline for you to follow this week to support the metabolic shift.

RESULT:

The storyboard was successfully created to represent key features such as medical records management, doctor communication, and appointment scheduling in a healthcare application.

CONCLUSION:

This experiment helped in understanding how modern healthcare applications are designed with user-friendly interfaces. It also showed how wireframes can be used to represent multiple functionalities like records, messaging, and appointments in a structured way.
