EXPERIMENT 7

Design and Evaluation of Login Page with Multiple Theme Variations using GIMP

AIM

To design a user-friendly mobile application login interface using GIMP and to create multiple theme variations such as Light, Dark, and Color themes. The objective is to analyze the visual appeal, usability, readability, and consistency of each design.

THEORY

User Interface (UI) design plays a crucial role in enhancing user experience. A well-designed login page ensures easy access, better usability, and visual satisfaction. The layout should be simple, consistent, and intuitive.

Different themes influence user perception and comfort:

- **Light Theme** provides better readability and clarity in bright environments.
- **Dark Theme** reduces eye strain, especially in low-light conditions.
- **Color Theme** enhances visual appeal and attracts users with modern design elements.

Consistency in layout, spacing, alignment, and typography is essential when creating multiple theme variations. Only the color scheme should vary while maintaining the same structural design.

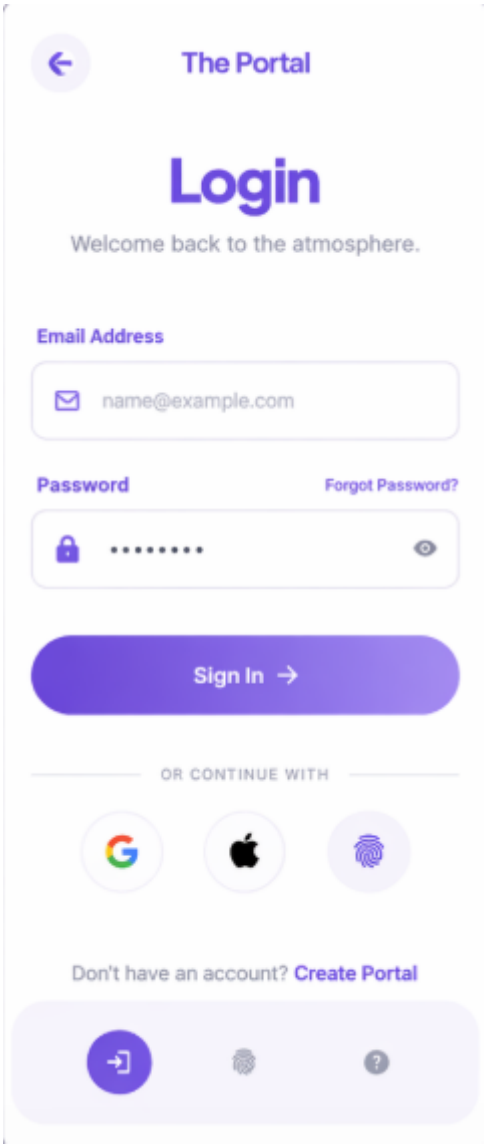
PROCEDURE

1. Launch the GIMP application and create a new project with dimensions **1080 × 1920 pixels**, suitable for mobile screen design.
2. Design the base layout of the login page by dividing the screen into sections such as header, content area, and footer.
3. Add UI elements using appropriate tools:
    - Use the **Text Tool** to insert headings such as “The Portal” and “Login”.
    - Add a subtitle: “Welcome back to the atmosphere.”
    - Create input fields for **Email Address** and **Password** using rectangle shapes.
    - Include a “Forgot Password?” link for usability.
4. Design a prominent **Sign In button** with rounded corners and proper alignment.
5. Add social login options such as **Google, Apple, and Fingerprint icons** for alternative login methods.
6. Insert footer text: “Don’t have an account? Create Portal” to guide new users.
7. Organize all elements into separate layers (e.g., text, buttons, input fields) to maintain clarity and allow easy modifications.
8. Duplicate the base layout to create different theme variations:
    - Apply a **Light Theme** with a white or light-colored background.
    - Apply a **Dark Theme** with a dark background and high-contrast elements.
    - Apply a **Color Theme** using gradient combinations like purple, blue, and pink.
9. Ensure that all three layouts maintain identical structure, alignment, spacing, and components.
10. Arrange the three themed layouts side-by-side into a single stitched image for comparison.

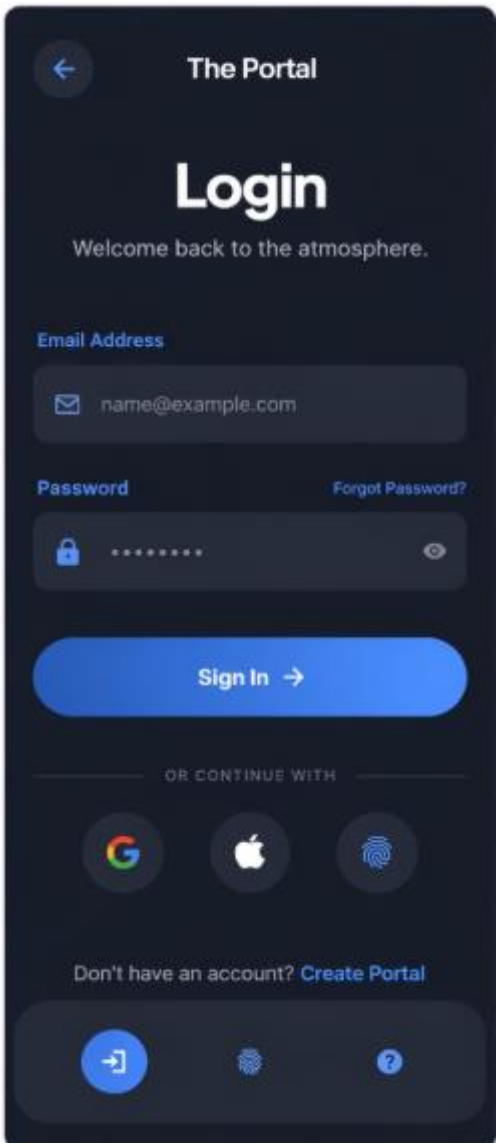
11. Export the final design as an image file (PNG format).

FRAMES

Light Theme



Dark Theme



The Portal
Login
Welcome back to the atmosphere.

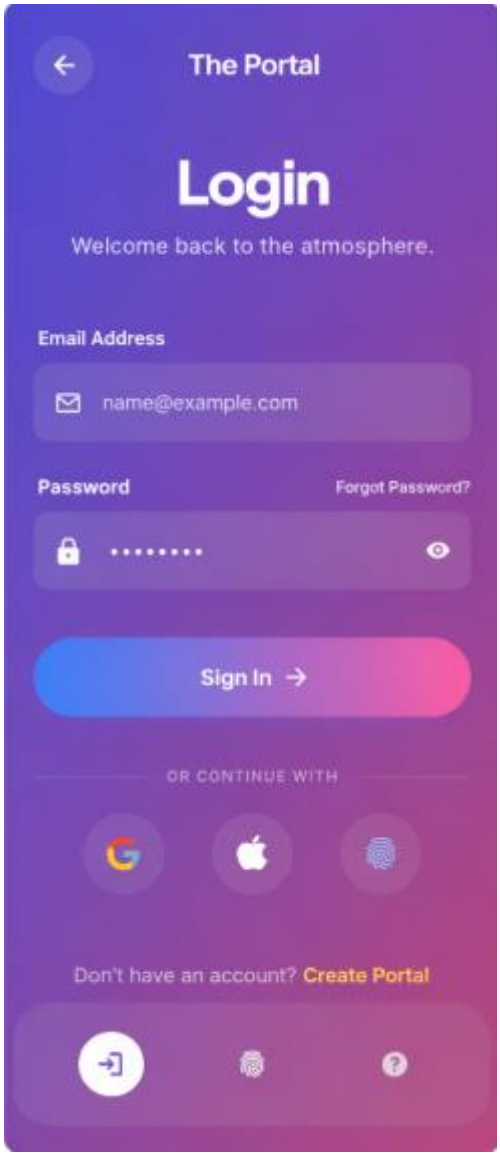
Don't have an account? Create Portal

Color Theme



RESULT

The login page was successfully designed using GIMP with three different themes: Light, Dark, and Color. All layouts maintained consistency in structure, alignment, and usability. The stitched image clearly demonstrates the visual differences between the themes while preserving the same interface design.
