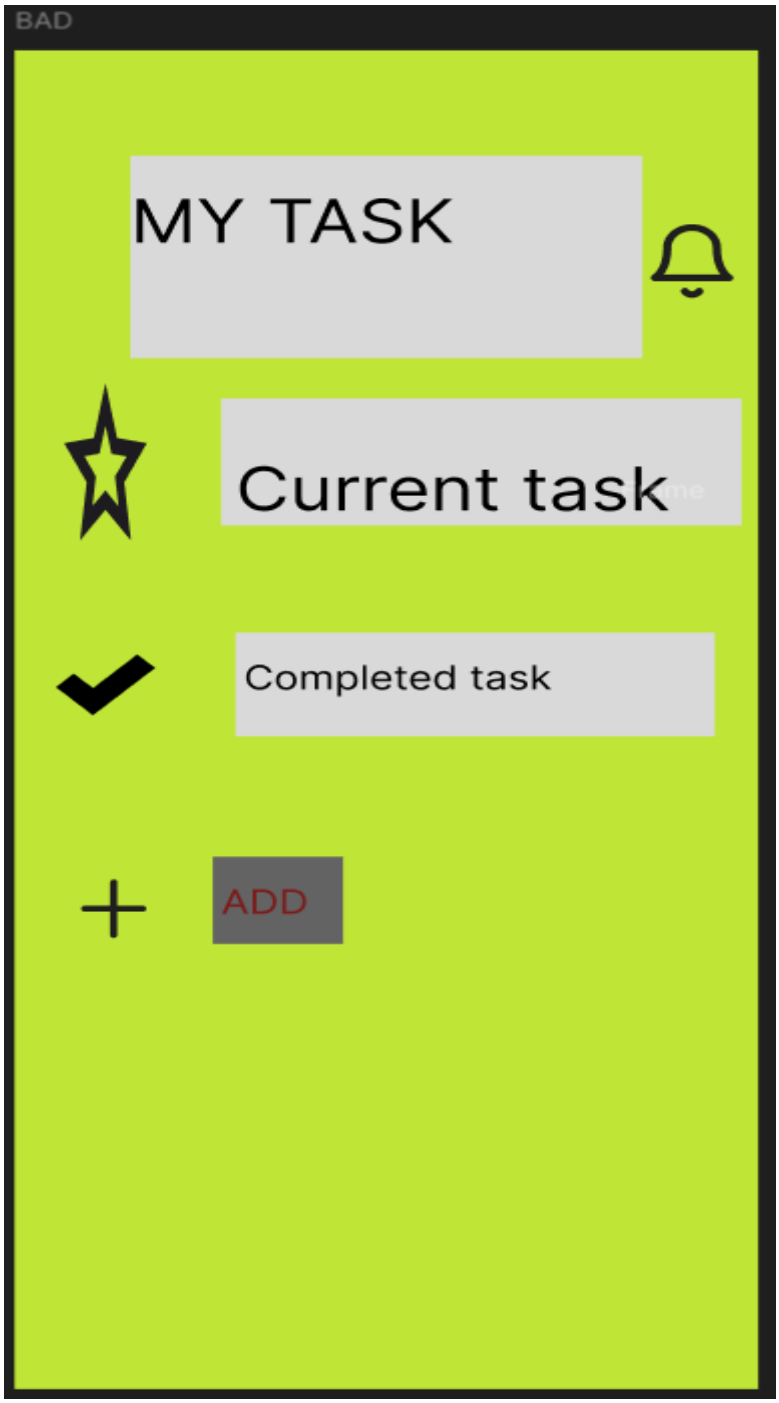
Bad Design:



BAD APP SCREEN – Task Manager Page Description

The bad app screen has a **poor and unstructured design**. The layout lacks proper alignment and spacing, making the interface appear cluttered and visually unbalanced. Elements such as icons, text boxes, and buttons are placed randomly on the screen instead of following a structured grid or alignment system. This makes it difficult for users to understand the flow of information.

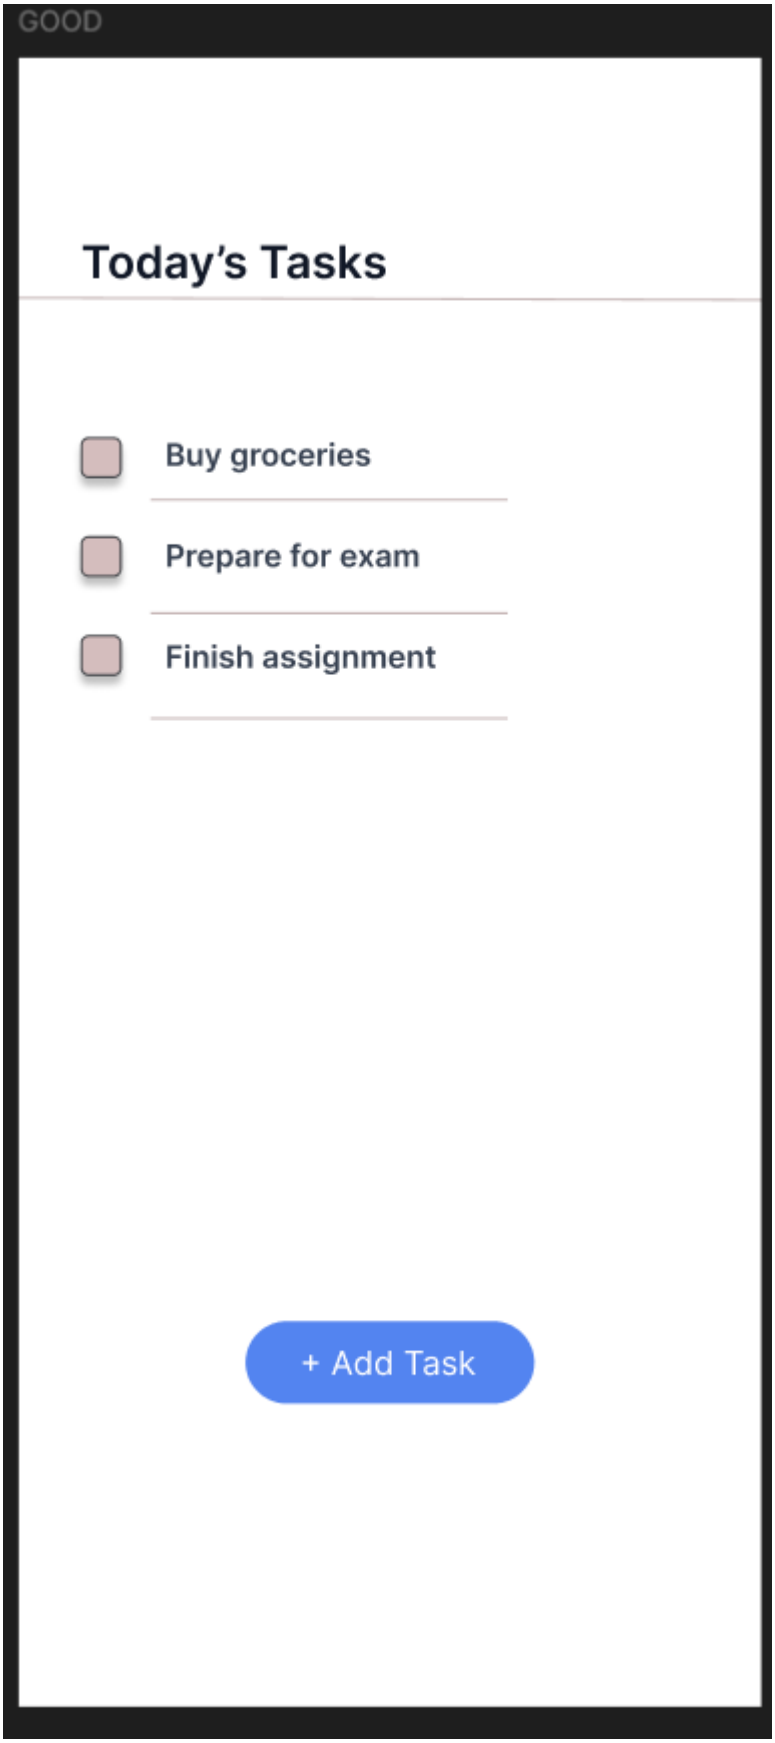
The **color choice is problematic**, as the bright green background is too intense and distracting. It reduces visual comfort and makes the interface look unprofessional. Additionally, the grey boxes do not create enough contrast with the background, which affects readability and clarity.

The **typography is inconsistent and poorly sized**. The title "MY TASK" is large while other text elements such as "Current task" and "Completed task" use different sizes without a clear hierarchy. This inconsistency makes it difficult for users to quickly identify which elements are headings and which are content.

The **icons are not properly aligned with their corresponding text.**The **"ADD" button is poorly designed and lacks emphasis**. It appears small, uses an unclear color combination, and does not stand out as the main action button. Users may not immediately recognize it as the primary interaction element for adding tasks.

Overall, the design fails to follow key **UI/UX principles such as visual hierarchy, alignment, consistency, and proper color usage**, resulting in a confusing interface and a poor user experience.

Good Design:



GOOD
Today's Tasks
Buy groceries
Prepare for exam
Finish assignment
+ Add Task

- **GOOD APP SCREEN – Task Manager Page Description**

The good app screen has a **clean and well-structured design**. The layout follows proper alignment and spacing, which makes the interface organized and easy to understand. All elements are placed in a clear vertical structure, allowing users to quickly scan and identify their tasks.

The **color scheme is simple and balanced**, using neutral background colors that reduce visual strain and improve readability. The minimal color palette helps important elements, such as the action button, stand out clearly.

The **typography is consistent and well-defined**. The heading "Today's Tasks" is larger and bold, creating a clear visual hierarchy that separates the title from the task list. The task descriptions use a consistent font size, making them easy to read and visually uniform.

The **task items are clearly structured** with checkboxes placed neatly beside each task. This alignment helps users quickly understand that they can mark tasks as completed. The spacing between tasks improves readability and prevents the interface from looking crowded.

The **"Add Task" button is prominently displayed** at the bottom of the screen. Its rounded shape and contrasting color make it easily noticeable as the main action on the page. This improves usability by clearly guiding users on how to add new tasks.

Overall, the design follows important **UI/UX principles such as visual hierarchy, consistency, alignment, and simplicity**, resulting in a clear, user-friendly interface and a better user experience.

Difference Between Good Website and Bad Website

• The bad app screen has a **cluttered and poorly arranged layout**, whereas the good app screen has a **clean and well-structured layout** that is easy to understand.

• The bad design **lacks proper alignment and spacing**, making the interface look messy, while the good design uses **consistent alignment and balanced spacing** to keep elements organized.

• The bad design **does not follow a clear visual hierarchy**, making it difficult for users to identify important elements, whereas the good design **clearly highlights the title and task list**, helping users quickly understand the content.

• The bad design uses **harsh and distracting colors**, which reduce visual comfort, while the good design uses a **simple and balanced color scheme** that improves readability.

• The bad design places **icons and text randomly**, creating confusion about their purpose, whereas the good design **aligns checkboxes and tasks properly**, making the interface intuitive.

• The bad design has a **small and unclear action button**, while the good design features a **prominent "Add Task" button** that stands out as the primary action.

• Overall, the bad design leads to a **confusing and difficult user experience**, whereas the good design provides a **clear, organized, and user-friendly experience**.
